[3] Key materials and processes

Silicon chip Alien Higgs3

- Read sensitivity of -20dBm Best performing among UHF Gen 2 RFID chips
- Total 800bits memory EPC 96bits (extensible to 480bits), User 512bits, TID 64 bits, Access& Kill password each 32bits and Lock password 64bits
- Most widely adopted chip for metal mounting UHF RFID tags
- RFcamp has adopted Alien Higgs3 since year of 2008.

Antenna PCB FR4, Copper etched, Gold plated

- FR4 (Fire retardant 4, composed of woven fiberglass cloth with an epoxy resin binder) Most stable and widely applied antenna materials in recent 30 years worldwide, with highest durability and consistent electrical property
- Copper etched antenna has much higher accuracy with lower tolerance than aluminum etched antenna and conductive ink printed antenna, which makes tag performance more consistent with lower read range variance.
- Gold is plated on chip bonded area of copper etched antenna, in order to enhance chip adhesion on antenna as well as electrical interconnection with antenna.

Packaging Double layer PCBs, laminated under high temperature and pressure

- Tag antenna has convoluted structure of two or three layers with copper ground plane, so tag is composed of double layer PCBs, tightly combined and laminated under high pressure and temperature of 200 $^{\circ}$ C for >2 hours.
- Many tag makers copy TITANTAG™ in appearance, but they can not copy tags' durability and read consistency.
- Surface of PCBs is coated with TOYO (black) PSR, best of kind which can protect it against electrical stress and water ingression.

Chip bonding Wire bonded, aluminum or gold

- Unlike other tag makers using flip chip bonding or chip soldering, RFcamp has adopted wire bonding technology since year of 2004.
- Wire bonding, though most complicated and expensive chip bonding method, is most stable in electrical interconnection and most durable in mechanical and temperature stresses. It, with highest precision, is also best fit for working on complicated antenna patterns of double layer PCBs.

POM^A Measure tag on POM (Poly Oxy Methylene, dielectric constant = 3.7~4.0)

Wet^B Measure tag under wet tissue

ALN-9720^c 40*15.5mm inlay (a.k.a. Hi-Scan) by Alien Technology

•SPIRAL reads 5.0 meters off metal in US band, much longer than ALN-9720. However, on high dielectric materials such as POM, read range decreases down to 2.5 meters and under wet covering, it decreases down to 3.0 meter.

[6] Spiral Options

Chip encoding service

- •Encodes EPC memory sector only*.
- •Encodes tags with 4 multiple digits from 16 bits (4 digits decimal or hex or ASCII) up to 480 bits (120 digits decimal or hex or ASCII) - upon customers' request.
- •Unless requested by customer, all tags are encoded with 24 digits decimal (Date 8 digits + Serial 16 digits), before shipped to customers. For example, code 20150814000000000001278 tells that tag was 1278th encoded on August 14, 2015.
- •Tag code can be permanently locked with password of 8 digits decimal or hex, upon customer's request.

Label& printing service

- Provides fast and reasonably priced custom label service with printing variable data, barcode and logo. •Label material is water proof and "hard
- to tear off" polysynthetic.

Laser engraving& direct printing service

- •With CO2 laser, tag surface is precisely and permanently etched into variable data, barcode and logo with black and yellow contrast.
- · With silk screen printing or pad printing method, tag surface is permanently printed with various colored logo or text.

Backing adhesive

- •Unless requested otherwise, RFcamp recommends and applies 3M468MP or 3M9472LE (Aka. 3M300LSE) double sided adhesive tapes for general applications. For harsh environments, RFcamp recommends 3M VHB tapes.
- For stronger adhesion, RFcamp suggests glue solutions such as Cemedine's Super X or Loctite's double compound epoxies.
- For special solution, please ask RFcamp.

Fasteners& brackets

- •For some small TITANTAGS, metal fastener may adversely affect tag read performance, so please ask RFcamp for suitable solution.
- •Upon customer's request, RFcamp develops metal based brackets for special applications, with optimal tag performance.

Encapsulations

•For special environment requiring enhanced chemical durability, RFcamp applies special coating materials over tag. Upon customer's request, RFcamp develops injection molded ruggedized case

or rubber (polyurethane or

silicone) based encapsulation.

^{*} For special encoding service (e.g. TID to EPC or user memory encoding), please ask RFcamp.
